Reactants, Products, and Leftovers

## Activity 2: Limiting Reactants in Chemical reactions

by Trish Loeblein http://phet.colorado.edu (assuming complete reactions)

Learning Goals: Students will be able to:

- Predict the amounts of products and leftovers after reaction using the concept of limiting reactant
- Predict the initial amounts of reactants given the amount of products and leftovers using the concept of limiting reactant
- Translate from symbolic (chemical formula) to molecular (pictorial) representations of matter
- Explain how subscripts and coefficients are used to solve limiting reactant problems.

1. A mixture of 4 moles of $\mathrm{H}_{2}$ and 3 moles of $\mathrm{O}_{2}$ reacts to make water. Identify: limiting reactant, excess reactant, and how much is unreacted.

## Limiting Excess

E. No reaction occurs since the equation does not balance with 4 mole $\mathrm{H}_{2}$ and $3{\text { mole } \mathrm{O}_{2}}$
