## Lesson Outline: Parallel and Perpendicular Lines

## Prerequisite Skills:

- Students should know the basics of linear graphs like the meaning of slope and intercept, how to graph in slope-intercept form and point-slope form.
- What "perpendicular" means and how it relates to a right angle.

## Grade Level: Algebra 1 (9th grade)

The lesson was designed to be done after the students have learned how to graph lines in slope-intercept and point-slope form and before the students start talking about systems of linear equations.

## Learning Goals:

- Students will be able to explain what parallel and perpendicular lines are.
- Students will be able to create a rule for when two lines are parallel, perpendicular, or neither based on slope.

## Common Core Standards:

CCSS.MATH.CONTENT.HSG.GPE.B. 5
Prove the slope criteria for parallel and perpendicular lines and use them to solve geometric problems (e.g., find the equation of a line parallel or perpendicular to a given line that passes through a given point).
Mathematical Practices:

1. Make sense of problems and persevere in solving them
2. Reason abstractly and quantitatively
3. Use appropriate tools mathematically
4. Attend to precision

## Materials:

- Chromebooks or other computers so students can access the PhET simulation: https://phet.colorado.edu/sims/html/graphing-lines/latest/graphing-lines en.html?scree $\mathrm{ns}=3$
- Worksheets
- Exit Tickets
- Challenge Problems

| Time | Students | Teacher |
| :---: | :--- | :--- |
| 5 min | Go to the PhET simulation and <br> explore what the controls do. The <br> students are encouraged to try <br> everything on the page. | Directs students to the PhET website by <br> providing a link (probably a shortened one <br> that should be edited directly in the <br> activity worksheet) <br> Walks around making sure the students <br> are not getting lost and helping guide <br> students to try controls they have not <br> already. |

\(\left.$$
\begin{array}{|c|l|l|}\hline 5 \text { min } & \begin{array}{l}\text { Write about what the points do and } \\
\text { what the "Save Line" button does. }\end{array} & \begin{array}{l}\text { Check student answers to see if there are } \\
\text { any misconceptions. }\end{array} \\
\hline 8-10 \mathrm{~min} & \begin{array}{l}\text { Explore parallel lines by creating } \\
\text { pairs of parallel lines and then } \\
\text { seeing what changes and what does } \\
\text { not. }\end{array} & \begin{array}{l}\text { Make sure students are using the "Save } \\
\text { Line" button correctly (I think this is the } \\
\text { easiest thing for the students to trip up on) }\end{array} \\
\hline 3-5 \mathrm{~min} & \begin{array}{l}\text { Explain what they found about } \\
\text { parallel lines. The goal at this point is } \\
\text { that students should recognize that } \\
\text { parallel lines have the same slope. }\end{array} & \begin{array}{l}\text { Lead a discussion so that students can } \\
\text { explain what they found about parallel } \\
\text { lines. This could be a whole class } \\
\text { discussion or you could have students } \\
\text { share their thoughts in groups or pairs. }\end{array} \\
\hline 10-15 \mathrm{~min} & \begin{array}{l}\text { Attempt to create pairs of } \\
\text { perpendicular lines. The students } \\
\text { should test whether their lines are } \\
\text { perpendicular using a right angle. } \\
\text { This could be the corner of a piece } \\
\text { of paper or something the teacher } \\
\text { provides. } \\
\text { Students will write pairs of equations } \\
\text { they find on the board for everyone } \\
\text { to see. Then, the students will try to } \\
\text { discover a pattern in the equations to } \\
\text { see what all pairs of perpendicular } \\
\text { lines have in common. } \\
\text { (I originally was going to have them } \\
\text { just write the slope since that is the } \\
\text { important part, but I decided to } \\
\text { change it to the full equations so } \\
\text { they can figure out that the slope is } \\
\text { what matters. You can change this if } \\
\text { you prefer) }\end{array} & \begin{array}{l}\text { Verify that students understand what } \\
\text { perpendicular lines are and that the } \\
\text { students are creating perpendicular lines. } \\
\text { I think one of the toughest parts of this lab } \\
\text { is going to be creating precisely } \\
\text { perpendicular lines. The worksheet asks } \\
\text { the students to identify something in the } \\
\text { room that has perpendicular lines. It } \\
\text { would be useful to check in with students } \\
\text { to see what they identified and to push the } \\
\text { students to identify something at their } \\
\text { table (like a piece of paper). }\end{array} \\
\hline 4-6 \text { min } & \begin{array}{l}\text { Students can ask questions or bring } \\
\text { up ideas they had as they worked on } \\
\text { the sim. }\end{array} & \begin{array}{l}\text { The teacher should urge the students to } \\
\text { check whether their lines are } \\
\text { perpendicular in some way. }\end{array}
$$ <br>
that perpendicular lines have slopes that <br>
are opposite reciprocals. This would also <br>
be a good time to address any difficulties <br>
or misconceptions that arose during the <br>

activity.\end{array}\right\}\)| If there is time, this could also be a good |
| :--- |
| time to address interesting questions such |
| as: |$|$

|  |  | If I have a line, how many lines could I <br> find that are parallel/perpendicular to that <br> line? <br> Are all pairs of lines either parallel or <br> perpendicular to each other? |
| :---: | :--- | :--- |
|  | Students complete an exit ticket <br> testing whether they can identify <br> pairs of lines that are parallel, <br> perpendicular, or neither. | Teacher distributes exit tickets. <br> The exit tickets could be interesting to <br> revisit at the beginning of the next class. <br> Important ideas: <br> People can provide different <br> parallel or perpendicular lines, but <br> both be correct because there are <br> an infinite number of correct <br> equations. <br> All that matters is slope. The <br> y-intercept does not matter when <br> considering parallel or <br> perpendicular. |
